

## Deck Bearer Batten

The **Cavibat - Deck Bearer Batten** has been developed exclusively by Cavibat, and is specifically designed to reduce moisture transfer and water-pooling for decking systems. The system is suitable for use under floating raft or fixed bearer decking, keeping bearers and fastenings high and dry protecting the structural integrity and durability of the deck,

*Wooden decking is frequently installed as a raft over concrete or waterproof membranes or bearers are fastened directly to the concrete. Both systems require moisture protection.*

## Benefits

- The batten provides a moisture barrier for support bearers under decking systems.
- Manufactured from 8mm polypropylene it lifts the bearers up out of water keeping them high and dry.
- Minimizes water pooling around the deck bearers as the batten is free draining.
- The non-abrasive slippery surface of the batten protects the integrity of water proofing membranes.
- Structural strength and durability, means the life expectancy of decking is greatly improved.
